Art Unit: 2879

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-10, drawn to a photomultiplier tube, classified in class 313, subclass 532.

II. Claims 11-23, drawn to a photoelectron emitting device, classified in class 313, subclass 103R.

III. Claims 24-37, drawn to a method, classified in class 427, subclass 58.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because photomultiplier tube does not require the claimed substrate as recited in claims 11 and 12. The subcombination has separate utility such as a radiant energy source, a display device etc.

Art Unit: 2879

Alternatively, Inventions I and II are unrelated since some limitations within these claims are not common therein. In other words, scope/limitations of these claims renders them to be distinct.

3. Inventions I and III (or II and III) are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case one of ordinary skill in the art would have used a spraying or a sedimentation method instead any claimed method as recited in claim 25.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.

Art Unit: 2879

6. A telephone call was made to Mr John Brannon on August 22nd to request an oral election to the above restriction requirement, but did not result in an election being made.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
